EDUCATION

Vellore Institute of Technology

Bhopal, India

- Bachelor of Technology - Computer Science and Engineering **CGPA: 8.1**

Aug 2022 – May 2026

EXPERIENCE

BlueStock.in

April 2025 – Jun 2025

SDE Intern

remote

- Developed a full-stack real-time stock price prediction application with real-time stock listing of different companies.
- Planned and implemented core functionalities, including price listings, with buying and selling functionality for each stock.
- Utilized D3.js library for virtualizing candlestick graphs in real time.
- Used JavaScript framework stack technologies for several functionalities including react, express, node.js and mongodb.
- I completed this internship with team of 6 members by collaborating on code and documentation in the project.

PROJECTS

Supply-Chain-Decision-Engine

[Github Link](#)

- Built a GenAI powered Supply Chain Copilot using an Agile development methodology, delivering features through 2-week sprint cycles and supporting data driven logistics and procurement decisions.
- Developed ML models for inventory optimization and stock-out prediction achieving **87% forecasting accuracy** and helping simulate proactive supply chain planning across **5+ warehouse locations**.
- Leveraged Gemini API and RAG **architecture** to process and retrieve insights from **2,000+ inventory, shipment, and supplier records**, generating contextual recommendations and risk assessments with **sub-3-second response times**.
- Created interactive analytics dashboards and geospatial tracking solutions for **500+ shipment simulations**, improving route-planning efficiency by **25%** and enhancing end-to-end supply chain visibility.
- Tech Stack Used:** python, react, node.js, Langchain, Recharts.js, mysql, pandas, numpy, xgboost, scikit-learn.

Intelligent-Customer-Support-Analytics-Platform

[Github Link](#)

- Built an end-to-end churn prediction system using **XGBoost** to identify at-risk customers based on behavioral metrics (Recency, Frequency, Monetary)
- Analyzed a dataset of 60000 customers, which improved the accuracy of model by 30% compared previous dataset.
- Delivered real-time insights via **Streamlit** dashboard including “Revenue at Risk” and churn trends
- Enhanced customer understanding through advanced behavioral feature engineering
- Tech Stack Used:** python, pandas, numpy, xgboost, sci-kit learn, streamlit, joblib.

Multi-Agent-Medical-Assistant

[Github Link](#)

- Created an AI-driven multi-agent Medical Assistant streamlining clinical workflows for 50+ healthcare and medical services with a 60% reduction in patients query response time from early versions
- Built a multi-agent system with specialized agents for symptom analysis and query responses, achieving 88% accuracy in preliminary diagnosis recommendations.
- Developed scalable Python-based architecture using external APIs and microservices
- Integrated advanced LLMs including gemini and gpt models, improving medical information accessibility and reduced healthcare consultation wait time
- Tech Stack Used:** kaggle datasets, pandas and numpy, react, fastapi, flask, oauth2.0, gemini-api.

SKILLS

- Languages:** python, javascript, java, c/c++
- Frameworks:** react, node.js, flask, fastapi, django
- Databases:** mysql, mongodb, sqlite
- AI/ML:** tensorflow, pytorch, scikit-learn, pandas, numpy, LLM, langchain
- Tools & Platforms:** aws, git, docker

Certifications

AWS Academy Cloud Architecting - [certification](#)

AWS Academy Cloud Foundation - [certification](#)

Generative AI Using IBM WatsonX (IBM) - [certification](#)

Bluestock.in - [certification](#)

ACHIEVEMENTS

- Selected to be part of the **McKinsey Forward** Program
- Achieved 1st place in rocket building competition by **Nebula SEDS** and **Karman** at the college with a team of 8
- Selected for the GSOC Club leadership team at VIT Bhopal, organized and managed 2 university-level hackathons.
