TECHNICAL SKILLS

Languages	**Proficient:** Python and SQL
	Experience: Java, C, C++, JavaScript, HTML, CSS
Tech Stack	Git, Github, Databricks, Bash, AWS, Jenkins
Frameworks & Libraries	numpy, pandas, matplotlib, seaborn, Plotly, React

EXPERIENCE

SDE Intern **April 2025 - June 2025**
Bluestock *Remote*

- Engineered a **predictive analytics pipeline** for financial markets, integrating real-time data streams to model stock performance trends.
- Designed **decision-support algorithms** to simulate trading scenarios, enabling users to validate investment strategies against historical data.
- Developed **interactive financial dashboards** to visualize high-frequency market data, reducing time-to-insight for end users.
- Used JavaScript framework stack technologies for several functionalities including React, Express, Node.js and MongoDB .
- I completed this internship with a team of 6 members by collaborating on code and documentation in the project.

PROJECTS

Attend AI

Github Link

- **Understood the problem statement** of manual attendance tracking and independently created an **end-to-end analytical and system solution** using machine learning and web technologies.
- Developed the **solution architecture** integrating the React frontend, FastAPI REST services, and database layers to support scalability and real-time processing.
- **System Architecture:** Attend-AI is an intelligent attendance tracking system with a React–based user interface that enables faculty and authorities to track student attendance quickly and efficiently,
- **Key Features**: Implemented a face recognition–based attendance system using a FastAPI backend written in Python. Faculty members can upload student details via CSV files, which are processed and stored securely in the database
- Enhanced **interactive visual analytics** using D3.js to analyze attendance trends (daily, weekly, monthly) and **monitor system outcomes** for stakeholders.
- **Tech Stack Used:** Python, JavaScript, React, Node.js, FastAPI, Ngrok

Intelligent Customer Support Analytics Platform

Github Link

- Worked on an **independent data science project**, translating business requirements into **statistical and machine learning solutions** through structured experimentation.
- Conducted **data and requirements gathering** by ingesting external API data using Python and Pandas, performing preprocessing, normalization, and outlier handling using Pandas and NumPy.
- Built, evaluated, and selected **machine learning models** using Scikit-learn, applying appropriate metrics and **model interpretability with SHAP**.
- Designed and implemented the **end-to-end solution architecture**, deploying ML models as **FastAPI REST APIs** and developing an **interactive analytics dashboard** using React and Chart.js for real-time predictions.

EDUCATION

Bachelors Of Technology in Computer Science and Engineering , VIT Bhopal University *July* - 2026

c.g.p.a.- 8.05

CERTIFICATIONS

AWS Academy Cloud Architecting - certification
Generative AI Using IBM WatsonX (IBM) - certification
AWS Academy Cloud Architecting - certification
Bluestock.in - certification
